Practice Quiz: Introduction to Python

Total points 5

1.

Question 1

Fill in the correct Python command to put "My first Python program" onto the screen.

1 / 1 point

1

```python
print("My first Python program")
```
RunReset

Correct

Way to go! You've given the computer the correct instruction in Python to do what you've asked of it.

2.

Question 2

Python is an example of what type of programming language?

1 / 1 point

Machine language

Platform-specific scripting language

Client-side scripting language

General purpose scripting language

Correct

You got it! Python is one of the general purpose scripting languages that are widely used for scripting and automation.

3.

Question 3

Convert this Bash command into Python:

1 / 1 point

1

```python
print("Have a nice day")
```
RunReset

Great job! You used the correct syntax, with proper punctuation, to make this code work in Python.

4.

Question 4

Fill in the correct Python commands to put "This is fun!" onto the screen 5 times.

1 / 1 point

```
1
2
for i in range(5):
    print("This is fun!")
```
RunReset

Correct

Well done! You remembered how to specify the range in Python, and have the "print" command do the work.

5.

Question 5

Select the Python code snippet that corresponds to the following Javascript snippet:

```
1
2
3
4
for (let i = 0; i < 10; i++) {
        console.log(i);
    }
```

1 / 1 point

```
1
2
3
4
5
6
for a in 1..5 do

 puts i

end
```

```
1
2
3
4
5
for (int i = 0; i < 10; i++)
{
```

```
print()
}
```

```
1
2
3
4
5
```

```
for (i in x)
{
print(i)
}
```

```
1
2
3
```

```
for i in range(10):
    print(i)
```

Correct

Right on! In Python, we use range() to initiate for loops.
